

Hello, I am Hoi Ching, your companion in this game. Our mission this time is to increase Passive Income for the Farm. Let's get started!

To start off at this 'Investment Farm', acquiring the active skill of 'Planting' can ensure you a stable income through harvesting crops. While you can generate a stable income stream with this skill set, your revenue will nevertheless be limited by human resource and time constraints. To make extra money, 'Creating Passive Income' is a must-have skill! Why don't you consider investing your capital in a poultry farm for consistent egg production and extra income?

Congratulations! You've earned 100,000 coins from egg production!

Saving your coins at a barn will barely contribute to capital growth in the long run.

Instead, by investing in another poultry farm, you can accumulate wealth through interest income. Suppose that the rate of return is 6% p.a., investing 100,000 coins into a poultry farm will yield an interest payment comparable to 6,000 coins. With the compounding effect, you will even have a chance to earn 180,000 coins within a decade!

Your long-term financial goals can hardly be realised by having regular savings alone. Still, with the power of compounding, you can generate interest earnings with both your savings and investments. In view of market fluctuation, building a portfolio with low-risk dividend stocks might give you promising returns with both capital and interest growth in the long run! Level clear!

Other than creating passive income and leveraging the power of compounding, here's a key skill to accumulate wealth—'Ready for Risk, Steady for Growth'.

In general, investment tools such as dividend stocks, bonds, and life insurance will provide a stable return with lower risk. You should choose a mix of financial products according to your needs to achieve your wealth accumulation goals.

Congratulations! Mission clear!

You have acquired 3 different skills to create passive income! See you in the next stage!
