

Important Risk Warning

- Unit Trusts, Bonds, Certificates of Deposit (CDs), structured products (including Equity Linked Investments, Structured Notes, Deposit Plus, Structured Investment Deposits and Capital Protected Investment Deposits) are NOT equivalent to time deposits. Unit Trusts and Bonds and some of the Structured Products are investment products and some Unit Trusts and Structured Products may involve derivatives. The investment decision is yours but you should not invest unless the intermediary who sells it to you has explained to you that the product is suitable for you having regard to your financial situation, investment experience and investment objectives.
- The price of securities/structured products may move up or down and may become valueless. Losses may be incurred as well as profits made as a result of buying and selling securities/structured products.
- In the worst case scenario, the value of the products may be worth substantially less than the original amount you invested (and in an extreme case could be worth nothing).
- Issuer's Risk – Bonds, CDs and structured products are subject to both the actual and perceived measures of credit worthiness of the issuer. There is no assurance of protection against a default by the issuer in respect of the repayment obligations. In the worst case scenario, you might not be able to recover the principal and interest/coupon if the issuer defaults on the Bonds, CDs and Structured Products.
- Investors should not make investment decisions based on this material alone.
- Investment involves risks. Past performance of the products is no guide to future performance. For details of the products, the related fees and charges and risk factors, please refer to the individual product materials and/or offering materials.
- Currency conversion risk – the value of your foreign currency and RMB deposit will be subject to the risk of exchange rate fluctuation. If you choose to convert your foreign currency and RMB deposit to other currencies at an exchange rate that is less favourable than that exchange rate in which you made your original conversion to foreign currency and RMB, you may suffer loss in principal.
- RMB denominated products are subject to liquidity risk as there may be no regular trading and active secondary market for RMB Income Instruments. The bid and offer spread of the price of RMB Income Instruments may be large, so investors may incur significant trading and realisation costs and may suffer losses accordingly.
- Warrants and CBBCs are non-collateralised products. The price of the Warrants/CBBCs may fall in value as rapidly as it may rise and investors may sustain a total loss of their investment. Prospective investors should ensure that they understand the nature and risks and seek for professional advice where applicable.

Structured Investment Deposits, Deposit Plus, Capital Protected Investment Deposits and CDs are not protected deposits and are not protected by the Deposit Protection Scheme in Hong Kong. Deposit Plus and Certificates of Deposit are NOT principal protected.

Additional risks are disclosed in the 'Risk Disclosure' section. Please refer to 'Risk Disclosure' section for details.

Important Risk Warning

- Structured products and Bonds are investment products and structured products may involve derivatives. The investment decision is yours but you should not invest unless the intermediary who sells it to you has explained to you that the product is suitable for you having regard to your financial situation, investment experience and investment objectives.
- Investors should not make investment decision based on this marketing material alone.
- Investment involves risk and past performance is not indicative of future performance. Please refer to the offering documents for further details, including fees and charges and risk factors.
- The price of products may move up or down. Losses may be incurred as well as profits made as a result of buying and selling products.
- Issuer's Risk – Bonds, CDs and structured products are subject to both the actual and perceived measures of credit worthiness of the issuer. There is no assurance of protection against a default by the issuer in respect of the repayment obligations. In the worst case scenario, you might not be able to recover the principal and interest/coupon if the issuer defaults on the Bonds, CDs and Structured Products.

Deposit Plus (DPS)/Capital Protected Investment Deposit (CPI)/Equity linked investments (ELI)/Bond and Certificate of Deposit (CD) are not equivalent to time deposits. DPS/CPI/ELI/Bond and CD are not protected deposits, and they are NOT protected by the Deposit Protection Scheme in Hong Kong. DPS/ELI and Bonds/CD are not principal protected.

Bonds and Certificates of Deposit ("CDs") Risk Disclosure

- There are risks involved in buying bonds/CDs. Before applying for any of bonds/CDs, you should consider whether bonds/CDs is suitable for you in light of your own financial circumstances and objectives. If you are in any doubt, get independent professional advice.
- Bonds/CDs are mainly medium to long-term fixed income products, not for short-term speculation. You should be prepared to hold your funds in bonds/CDs for the full tenure; you could lose part or all of your principal if you choose to sell bonds/CDs prior to maturity.
- It is the issuer to pay interest and repay principal of bonds/CDs. If the issuer defaults, the holder of bonds/CDs may not be able to receive back the interest and principal. The holder of bonds/CDs bears the credit risk of the issuer and has no recourse to HSBC unless HSBC is the issuer itself.
- Indicative prices of bonds/CDs are available and bonds/CDs prices do fluctuate when market changes. Factors affecting the market price of bonds/CDs include, and are not limited to, fluctuations in interest rates, credit spreads and liquidity premiums. The fluctuation in yield generally has a greater effect on prices of longer tenor bonds/CDs. There is an inherent risk that losses may be incurred rather than profit made as a result of buying and selling bonds/CDs.
- If you wish to sell bonds/CDs, HSBC may repurchase them based on the prevailing market price under normal market circumstances, but the selling price may differ from the original buying price due to changes in market conditions.
- There may be exchange rate risks if you choose to convert payments made on the bonds/CDs to your home currency.
- The secondary market for bonds/CDs may not provide significant liquidity or may trade at prices based on the prevailing market conditions and may not be in line with the expectations of bonds/CDs' holders.
- If bonds/CDs are early redeemed, you may not be able to enjoy the same rates of return when you use the funds to purchase other products.
- Do not purchase the bonds/CDs unless you fully understand and are willing to assume the risks associated with it.

Additional risk disclosure to High yield bonds

- High yield bonds are typically rated below investment grade by a credit rating agency, or unrated. Whilst high yield bonds bear a higher yield opportunity than investment grade bonds, they present greater risks of issuer default, liquidity, volatility and non-payment of principal and interest.
- The risk of default on principal and/or interest, is greater for high yield bonds due to higher credit risk of the issuer and lower priority of claim by the bond holders in case of issuer default.
- High yield bonds can sometimes be less liquid than investment-grade bonds, depending on the issuer and the market conditions at any given time. Investors may be difficult to sell the high yield bond before maturity or at prices in line with their expectation compare to listed bond.
- High yield bonds tend to be more vulnerable to economic cycles and changes in the issuer's financial conditions or business developments. In particular, during economic downturn, such bonds typically fall more in value than investment-grade bonds as the issuer default risk rises and investors become more risk adverse.
- Please be aware the concentration risk of investing in bonds issued by the same issuer or companies by the same group. A degrading of any of the group company's credit rating may expose the whole group to contagion risk. Please be also aware the risk of over concentrating investment in the high risk investment products.

Renminbi ("RMB") Related Products Risk Disclosure

- There may be exchange rate risks if you choose to convert RMB payments made on the bonds/CDs to your home currency.
- RMB debt instruments are subject to interest rate fluctuations, which may adversely affect the return and performance of the RMB products.
- RMB products may suffer significant losses in liquidating the underlying investments if such investments do not have an active secondary market and their prices have large bid/offer spreads.
- You could lose part or all of your principal if you choose to sell your RMB bonds/CDs prior to maturity.

Risk Disclosure

Stocks Risk Disclosure

- Making available to you any advertisements, marketing or promotional materials is part of our Bank's ordinary course of securities dealing business. It shall not, by itself, constitute solicitation of the sale or recommendation of any investment products.
- Investment involves risk. Notwithstanding the benefits of offer(s) mentioned herein, you should carefully consider the risks and features of any investment products (including but not limited to equities/exchange traded funds/exchange traded derivatives & structured products) or services mentioned herein to assess whether they are appropriate for you in view of your investment experience, objectives, financial resources and relevant circumstances. The price of investment products may move up or down. Losses may be incurred as well as profits made as a result of buying and selling investment products.

Unit Trusts Risk Disclosure

- Funds which are invested in certain markets and companies (eg emerging, commodity markets and smaller companies etc.) may also involve a higher degree of risk and are usually more sensitive to price movements.
- Credit Risk/Interest Rate Risk – a fund that invests in fixed income securities may fall in value if interest rates change, and is subject to the credit risk that issuers may not make payments on such securities. Price of the fund may have a high volatility due to investment in financial derivative instruments and may involve a greater degree of risk than in the case with conventional securities.
- Counterparty Risk – a fund will be exposed to credit risk on the counterparties with which it trades in relation to financial derivative instrument contracts that are not traded on a recognised exchange. Such instruments are not afforded the same protections as may apply to participants trading financial derivative instruments on organised exchanges, such as the performance guarantee of an exchange clearing house. A fund will be subject to the possibility of insolvency, bankruptcy or default of a counter party.

Bonds and Certificates of Deposit ('CDs') Risk Disclosure

- Bonds/CDs are mainly medium to long-term fixed income products, not for short-term speculation. You should be prepared to hold your funds in bonds/CDs for the full tenure; you could lose part or all of your principal if you choose to sell bonds/CDs prior to maturity.
- It is the issuer to pay interest and repay principal of bonds/CDs. If the issuer defaults, the holder of bonds/CDs may not be able to receive back the interest and principal. The holder of bonds/CDs bears the credit risk of the issuer and has no recourse to HSBC unless HSBC is the issuer itself.
- Indicative prices of bonds/CDs are available and bonds/CDs prices do fluctuate with market changes. Factors affecting the market price of bonds/CDs include, and are not limited to, fluctuations in Interest Rates, Credit Spreads and Liquidity Premiums. The fluctuation in yield generally has a greater effect on prices of longer tenure bonds/CDs. There is an inherent risk that losses may be incurred rather than profit made as a result of buying and selling bonds/CDs.
- If you wish to sell bonds/CDs, HSBC may repurchase them based on the prevailing market price under normal market circumstances, but the buying price may differ from the original selling price due to changes in market conditions.
- There may be exchange rate risks if you choose to convert payments made on the bond/CDs to your home currency.
- The secondary market for bonds/CDs may not provide significant liquidity or may trade at prices based on the prevailing market conditions and may not be in line with the expectations of holders of bonds/CDs.

- If bonds/CDs are redeemed early, you may not be able to enjoy the same rates of return when you use the funds to purchase other products.

- Not the same as buying the linked currency—Investing in Deposit Plus is not the same as buying the linked currency directly.

- Liquidity risk—Deposit Plus is designed to be held until maturity. You do not have the right to request early termination of this product before maturity. Under special circumstances, the Bank has the right to accept your early redemption request at its sole discretion and on a case by case basis. - Currency risk—If the deposit currency and/or linked currency is not your home currency, and you choose to convert it back to your home currency upon maturity, you may make a gain or loss due to exchange rate fluctuations.
- Risks relating to RMB – You should note that the value of RMB against other foreign currencies fluctuates and will be affected by, amongst other things, the PRC government's control (for example, the PRC government regulates conversion between RMB and foreign currencies), which may adversely affect your return under this product. - Not the same as buying the linked currency–Investing in Capital Protected Investment Deposit is not the same as buying the linked currency directly.
- Market risk–The return of Capital Protected Investment Deposit will depend upon the exchange rates of currency pair against trigger rate at the fixing time on the fixing date. You must be prepared to take the risk of earning the lower payout/no return (if exchange rate performs against expectation) on the money invested.

Your return upon such early redemption will likely be lower than that if the deposit were held until maturity and may be negative.
- Credit risk of the Bank – Capital Protected Investment Deposit is not secured by any collateral. When you invest in this product, you will be relying on the Bank’s creditworthiness. If the Bank becomes insolvent or defaults on its obligations under this product, you can only claim as an unsecured creditor of the Bank. In the worst case, you could suffer a total loss of your deposit amount.
- Currency risk–If the deposit currency is not your home currency, and you choose to convert it back to your home currency upon maturity, you may make a gain or loss due to exchange rate fluctuations.
- Risk of early termination by the Bank–The Bank shall have the discretion to uplift a Deposit or any part thereof prior to the Maturity Date (subject to the deduction of such break costs or the addition of such proportion of the return or redemption amount, which may result in a figure less than the original principal amount of the Deposit) if it determines, in its sole discretion, that this is necessary or appropriate to protect any right of the Bank to combine accounts or set-off, or any security interest, or to protect the Customer’s interests.
- Risks relating to RMB–You should note that the value of RMB against other foreign currencies fluctuates and will be affected by, amongst other things, the PRC government’s control (for example, the PRC government regulates conversion between RMB and foreign currencies), which may adversely affect your return under this product when you convert RMB into your home currency. The value of your RMB deposit will be subject to the risk of exchange rate fluctuation. If you choose to convert your RMB deposit to other currencies at an exchange rate that is less favourable than that in which you made your original conversion to RMB, you may suffer loss in principal.
